

## Recursion

Lili has series of numbers with these function:

- F(0) = 1 and F(1) = 2
- F(n) = F(n-1) + n + F(n-2) + n 2
- If n is multiple of 5, the formula is  $n \times 2$

Lili wants to write the N-th number and the number of times function F(n), n multiple of 3, is called.

### Format Input

The first line contains an integer T stating the number of test cases. Each test case contains an integer N which indicates the N-th number to be calculated.

## Format Output

Consists of T lines where each line has the format "Case # X:", where X is the test case number starting at 1. For each test case, output a single line containing 2 integers which are the N-th number and the number of times F(n) multiples of 3) is called during calculations. Each integer is separated by a space.

#### Constraints

- $1 \le T \le 50$
- $1 \le N \le 50$

# Sample Input (standard input)

7 2 3 4 5 6 14 15

## Sample Output (standard output)

Case #1: 5 0
Case #2: 11 1
Case #3: 22 1
Case #4: 10 0
Case #5: 42 2
Case #6: 854 23
Case #7: 30 1

#### Note

Even though it is not stated explicitly, you should know by now that excessive space / newline are treated as **WRONG ANSWER**.

## Recursion

Lili memiliki serangkaian bilangan dengan fungsi berikut:

- F(0) = 1 and F(1) = 2
- F(n) = F(n-1) + n + F(n-2) + n 2
- Jika n adalah kelipatan 5, rumusnya adalah  $n \times 2$

Lili ingin menuliskan bilangan ke-N dan total pemanggilan fungsi F(n) di mana n kelipatan 3.

### Format Input

Baris pertama berisi bilangan bulat T yang menyatakan jumlah test case. Setiap test case berisi bilangan bulat N yang menunjukkan bilangan ke-N yang ingin dikalkulasi.

## Format Output

Terdiri dari T baris di mana setiap baris memiliki format "Case #X:", di mana X adalah nomor test case yang dimulai dari 1. Untuk setiap test case, output satu baris berisi 2 bilangan bulat yang ingin ditampilkan dan total pemanggilan F(n) kelipatan 3) untuk membuat angka ke-N. Setiap bilangan bulat dipisahkan oleh sebuah spasi.

### Constraints

- $1 \le T \le 50$
- $1 \le N \le 50$

Case #3: 22 1
Case #4: 10 0
Case #5: 42 2
Case #6: 854 23
Case #7: 30 1

#### Note

Meskipun tidak dinyatakan secara eksplisit, Anda harus tahu sekarang bahwa spasi / baris yang berlebihan itu diperlakukan sebagai WRONG ANSWER.
